

PADDLE BOAT SEASONAL SERVICE

At the start of each boating season, we recommend servicing the pedal drive system, including chains, bearings, and pedals, with synthetic gear oil. Review the following to familiarize yourself with the lube points.

Lube is applied with oil can pump oiler (shown) or plastic squeeze bottle. Very little oil is needed for each point. The chain however is best covered in oil with a towel held below to catch and wipe up.

Oil both side of pedals:

Oil both sides of shaft bearings:

Oil chain completely with towel on bottom. Allow chain to absorb oil into each link:

Note: 4x4 has two separate chains requiring both to be oiled.
